BIRTHDAY TELEGRAMS ONLY 20¢ LOCALLY—25¢ TO ANY WESTERN UNION POINT IN UNITED STATES

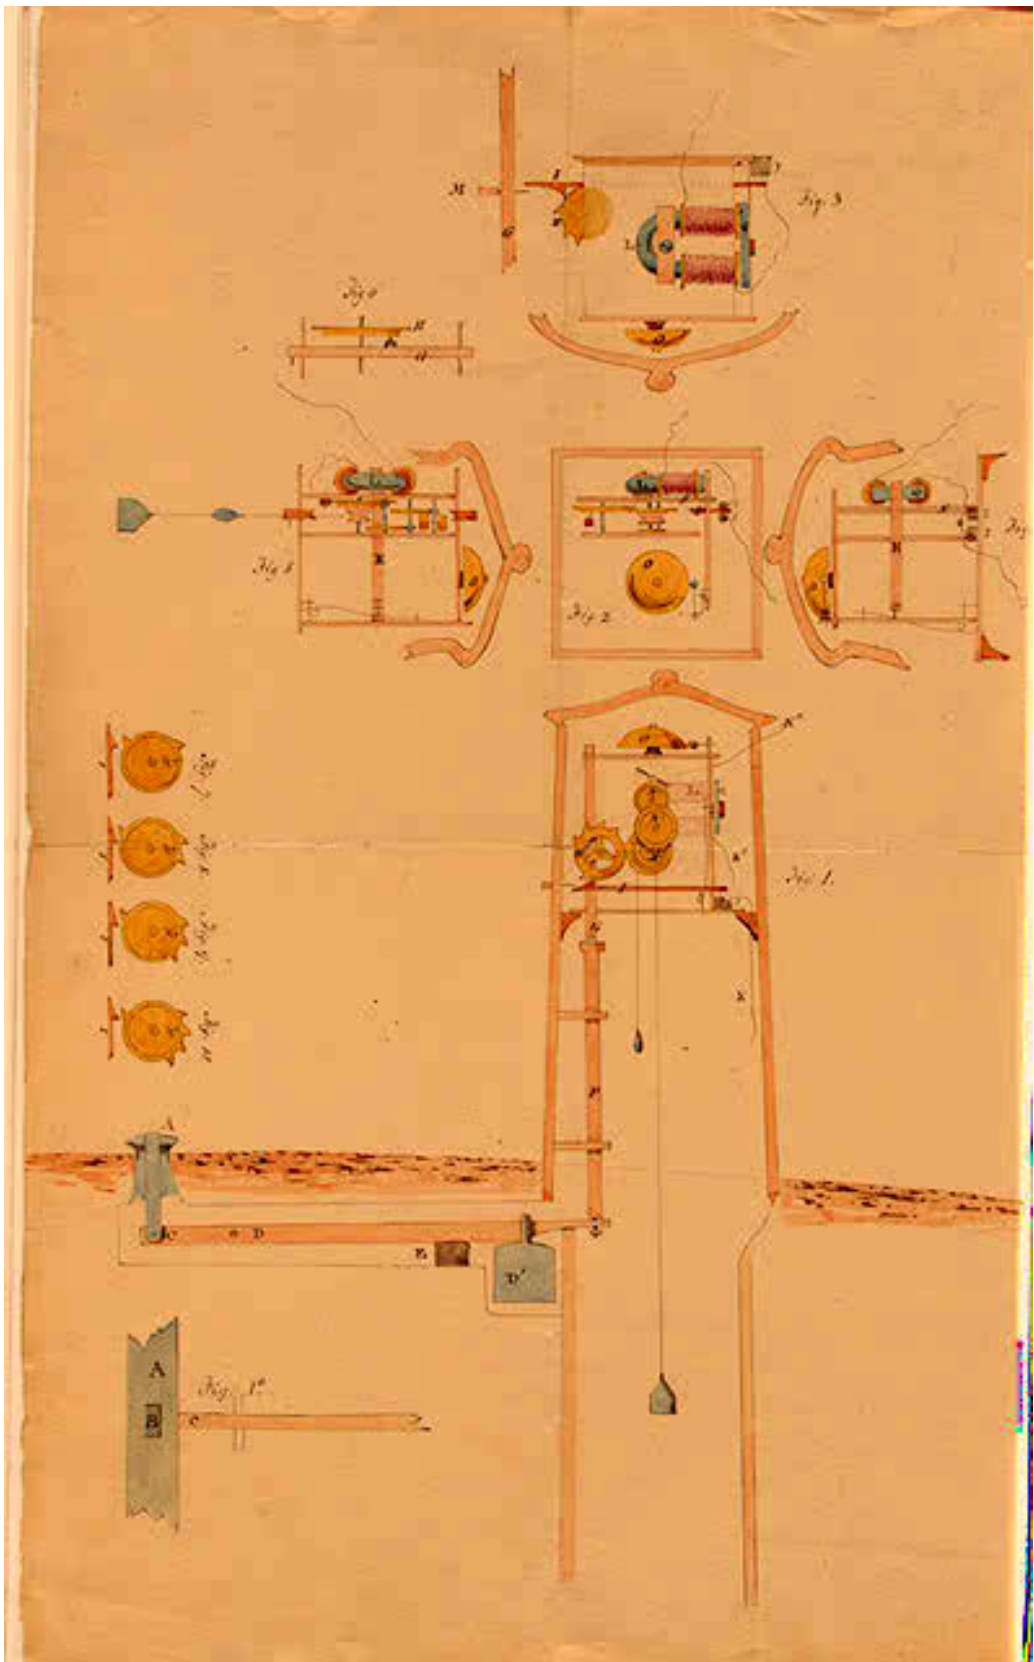

#1

present at a lesson of
Mr. Gouraud. —

Prepared plate as ~~usual~~
usual with acid &c. acid
acid better washed over
than in the former plate
but the edges and a small
portion of the plate was not
so well acidized; the iodine
attacked these parts more
strongly, and when comple-
ted the result was a misty
in those parts. Put the
plate in the camera,

2 minutes before 3 o'clock
Sun shining bright, but
the objects were in shadows
mostly. the prevailing color
was grey over all objects
except the brick church
which was red with sun-
light upon it striking obliquely
thus, the scene towards
Boardway Street

Gift, 1922 (125A, 123.11)

In March 1839, artist and inventor Samuel F. B. Morse traveled to Paris to promote his latest invention, the telegraph. On this trip, Morse met with Louis Jacques Mandé Daguerre, inventor of the "daguerreotype," one of the earliest photographic processes. Morse was the first American to see examples of this new art form. After returning from abroad, Morse experimented with the process, made early portraits, and taught others in the art. His notebook records his photographic experiments--both his successes and failures.

Color Sketch of a Railway Telegraph Signal by Samuel F. B. Morse, 1838

In 1838, six years before his telegraph's first successful public demonstration, Morse was in Europe attempting to obtain a patent for a telegraph system that would indicate by sound the presence of a railroad train at any chosen point on the track. He was not successful and returned to the U.S. to continue work.
